WORK EXPERIENCE

Senior Software Engineer

Space307

January 2019 - Present

I had developed backend for e-wallet internet application using microservice architecture. Me and my team worked on payment processing as well as on general product features like a notification system. Now I'm working on trading platform which serves more than 15 000 clients online in peaks every day. I help to build system which carries on flexible trading conditions for each user depending on its trading experience.

Senior Software Engineer

Devim

June 2016 - January 2019

I focused on development for financial projects. I helped the company to develop its own scalable, reliable microservice architecture. Participated in designing, implementing and releasing CRM system for country-wide financial company.

Software Engineer

MobileUp

February 2016 - June 2016

I participated in development of the city bike rental system on position of core backend developer. I communicated with hardware and mobile software teams. I facilitated development, testing, and releasing the project.

EDUCATION

St. Petersburg State Electrotechnical University "LETI"
Master's degree in Computer security
