Additional Skills

- Go
- PostgreSQL
- Redis
- RabbitMQ
- Docker
- Microservice architecture
- Database design and optimisation

Professional Summary

I create complex backend using modern or cutting-edge technologies for 7 years. I have experience with financial, social, and government projects for hundreds of thousands of customers. Successfully apply microservices approach.

Work Experience

01/2019-Present

Space307, Saint-Petersburg

I have developed backend for e-wallet application using microservice architecture and modern technologies such as Golang, PostgreSQL, RabbitMQ, GCP and other.

Now I'm working on trading platform with such technology stack but even more complex tasks.

06/2016-01/2019

Devim, Saint-Petersburg

At Devim I have focused on financial projects development for the world markets. Here I have helped the company to develop its own scalable and flexible microservice architecture using the best available technologies.

02/2016-06/2016

MobileUp, Saint-Petersburg

I have participated in the development of the city bike rental system which is called "Velogorod". I have improved the backend API and web version of service. I mostly participated in the development, testing, and execution of the project as an expert.

Education

2009 – 2015

St. Petersburg State Electrotechnical University "LETI"

Master's degree in Computer security

Languages

English — B1

Russian — Native
