SOFTWARE ENGINEER

PROFILE INFO

I have 9-year experience working on financial, social, and government projects for hundreds of thousands customers. I successfully apply microservices approach. I usually ask my team about our performance and efficiency for business. I try to make every solution as much reasonable as possible and after that learn from the result along with my team.

WORK EXPERIENCE

Senior Software Engineer

Mail.ru Group

August 2020 - Present

I participate in development of electronic bulletin board service called Youla. As part of BtoB team I developed integrations with a number of external services such as Vkontakte. Also as part of vehicles team I help to develop appropriate domain in Youla.

Senior Software Engineer

Space307

January 2019 - August 2020

I had developed backend for e-wallet internet application using microservice architecture. Me and my team worked on payment processing as well as on general product features like a notification system. Now I'm working on trading platform which serves more than 15 000 clients online in peaks every day. I help to build system which carries on flexible trading conditions for each user depending on its trading experience.

Senior Software Engineer

Devim

June 2016 - January 2019

I focused on development for financial projects. I helped the company to develop its own scalable, reliable microservice architecture. Participated in designing, implementing and releasing CRM system for country-wide financial company.

EDUCATION

St. Petersburg State Electrotechnical University "LETI"
Master's degree in Computer security
